Your AI-Built App Isn't Safe Yet.

Automated security analysis for Android apps built with AI.
Upload your APK. Get a comprehensive security report in minutes.

Trusted by 2,000+ developers

⚠ The Problem

AI Writes Code Fast.
It Also Writes Vulnerabilities Fast.

🔑

Hardcoded Secrets

AI assistants frequently embed API keys, tokens, and credentials directly in source code, leaving them exposed to anyone who decompiles the APK.

CRITICAL

💾

Insecure Storage

Sensitive user data stored in plaintext SharedPreferences or SQLite databases, accessible to any app on the device.

HIGH

🔒

Missing Encryption

Network calls without SSL pinning or certificate validation, making the app vulnerable to man-in-the-middle attacks.

HIGH

⚙ How It Works

From APK to Full Security Report in 3 Steps

01

Upload

Drag & drop your APK file or browse from your device. Supported up to 200MB.

02

Analyze

Our engine performs 50+ static and dynamic security checks automatically.

03

Report

Get an AI-powered detailed report with prioritized fixes and code context.

✨ Features

Everything You Need to Ship Secure Android Apps

Static Analysis

- Manifest analysis & component exposure detection
- Hardcoded secrets & credential scanning
- Cryptographic misuse identification
- Code quality & best practice validation

Dynamic Analysis

- Frida instrumentation for runtime behavior
- Logcat output analysis & sensitive data detection
- Network traffic inspection
- Runtime permission usage monitoring

AI-Powered Reports

Intelligent remediation suggestions powered by MiniMax M2.5

OWASP Top 10

All findings mapped to OWASP Mobile Security standards

50+ Security Checks

Comprehensive coverage across all vulnerability categories

Export & Share

Download as PDF or JSON. Share reports with your team.

💎 Pricing

Start Free. Scale When Ready.

Hobby

Free

- ✓ 3 scans per month
- ✓ Static analysis only
- ✓ Basic security report
- ✓ Community support
- × Dynamic analysis
- × AI-powered reports
- × API access

Most Popular

Professional

$29 /mo

- ✓ Unlimited scans
- ✓ Static + Dynamic analysis
- ✓ AI-powered reports
- ✓ Priority support
- ✓ API access
- ✓ CI/CD integration
- ✓ Team workspace

Enterprise

$99 /mo

- ✓ Everything in Pro
- ✓ Team management
- ✓ SSO / SAML
- ✓ SLA guarantee
- ✓ Dedicated support
- ✓ Custom integrations
- ✓ Invoice billing

Frequently Asked Questions

Is my APK data secure?

What types of vulnerabilities do you detect?

We detect 50+ vulnerability types including hardcoded secrets, insecure data storage, improper cryptography, insecure network communication, client-side injection, and more. All findings are mapped to OWASP Mobile Top 10 and CWE identifiers.

How long does analysis take?

Can I integrate this into my CI/CD pipeline?

What makes this different from MobSF?

How does the AI report generation work?

Don't Ship Vulnerable Apps.

Join 2,000+ developers who trust Shinodroid to catch security issues before their users do.

No credit card required · 3 free scans · 30s setup
