

Shinodroid

AI-Powered Android Security Analysis Platform

Automated vulnerability detection, dynamic instrumentation, and intelligent remediation — powered by **Proprietary AI Engine**.

🔒 50+ Security Checks | 🧠 AI Triage Engine | ⚡ Static + Dynamic | 📊 OWASP MASVS Mapped

CONFIDENTIAL — 2026

THE PROBLEM

Mobile Apps Are Shipping Dangerously Insecure

75% of mobile applications contain at least one security vulnerability, and Android attack likelihood surged from 34% to 84% in 2024 alone. (Build38, 2024 · Digital.ai, 2024)

Hardcoded Secrets

API keys, tokens, and credentials embedded directly in source code — exposed to anyone who decompiles the APK.

CRITICAL

Insecure Storage

Sensitive user data in plaintext SharedPreferences or SQLite databases, accessible to any app on the device.

HIGH

Missing Encryption

Network calls without SSL pinning or certificate validation — vulnerable to man-in-the-middle attacks.

HIGH

MARKET OPPORTUNITY

A ₹1.05 Lakh Cr Market Growing 24% YoY

The global mobile application security market was ₹22,970 Cr in 2023 and is projected to reach ₹1,05,000 Cr by 2030 at a 24.2% CAGR. Android powers 3.9 billion active users. (Grand View Research, Jan 2025 · BankMyCell, 2025)

3.9B	75%	₹45Cr	24.2%
Active Android Users	Apps with ≥1 Vulnerability	Avg. Data Breach Cost (IBM '24)	Market CAGR ('24–'30)

Market Size by 2030 (Grand View Research)

₹22,970 Cr (2023) → ₹1,05,000 Cr (2030)

OUR SOLUTION

Upload. Analyze. Ship Secure.

Shinodroid is a fully automated Android security analysis platform that combines 6 specialized engines with AI-powered triage to deliver actionable, developer-friendly reports in under 10 minutes.

01

Upload APK

Drag & drop your Android package. Encrypted upload, sandboxed processing.

02

Deep Analysis

6 engines scan in parallel — static, dynamic, behavioral, database, logcat, and AI triage.

03

AI Report

Our proprietary AI engine generates prioritized remediation with exploit scenarios and code fixes.

TECHNOLOGY

6-Engine Security Pipeline

Every APK passes through our multi-engine pipeline. Each engine specializes in a different attack surface, feeding findings into the AI triage layer.

Deep Static Analysis

Manifest analysis, component exposure, hardcoded secrets, cryptographic misuse, code quality.

Dynamic Instrumentation

Runtime SSL pinning bypass, root detection evasion, hook-based API monitoring on Android emulator.

Behavioral Analysis

12 categories of malicious behavior patterns: telephony, SMS, GPS, device settings abuse.

Logcat Leak Detection

Passwords, tokens, PII accidentally logged to system output during runtime execution.

Database Misconfiguration

Open databases, exposed cloud storage buckets, API key leaks, insecure database rules.

AI Triage — Proprietary Engine

Final-stage intelligence: executive summary, attack trees, OWASP mapping, Gantt remediation roadmap.

AI CORE

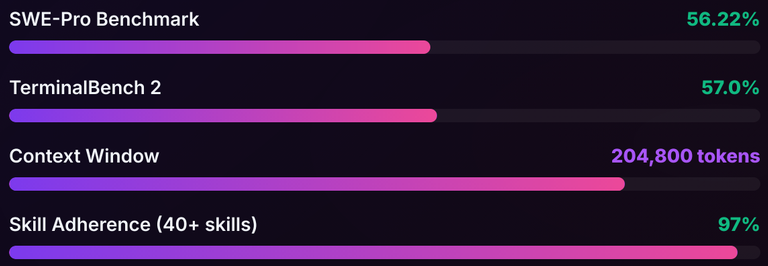

Powered by Proprietary AI Engine

Our AI triage engine runs as the final stage of the pipeline, synthesizing all findings into an actionable, documentation-grade security report with visual dashboards.

AI Report Outputs

- ✓ Executive summary with risk matrix
- ✓ Mermaid severity pie & category breakdown
- ✓ Per-finding exploit scenario analysis
- ✓ Attack tree & kill chain diagrams
- ✓ OWASP MASVS compliance mapping
- ✓ Prioritized remediation Gantt chart
- ✓ Code-level fix suggestions

Why Our AI Engine?

Industry-leading cost efficiency — <⅓ of competing models at comparable quality

COMPETITIVE LANDSCAPE

Shinodroid vs. The Market

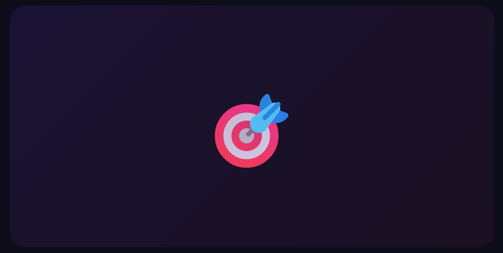

CAPABILITY	SHINODROID	OPEN-SOURCE TOOLS	VERACODE	NOWSECURE
Static Analysis	✓	✓	✓	✓
On-Device Frida Instrumentation	✓ **Automated**	✓ **(manual)**	Cloud sandbox	✓
AI-Native Report Generation	✓ **AI**	✗	✗	Policy-based
Dedicated Database Audit Engine	✓ **Deep scan**	✗	✗	Via traffic
Behavioral Pattern Analysis	✓ **Built-in**	✗	✓	✓
OWASP MASVS Mapping	✓ **Auto**	Manual	✓	✓
CI/CD API	✓	✗	✓	✓
Time to First Scan	**0 min (SaaS)**	Self-hosted	Weeks	Days
Starting Price	**Free**	Free (DIY)	Enterprise	Enterprise

Key differentiator: Only platform combining 6 specialized engines with AI-native report generation in a zero-setup SaaS — at <⅓ the compute cost.

PRODUCT

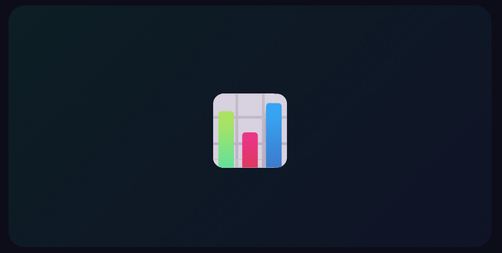

Premium 3D Dashboard Experience

A stunning, glassmorphic interface with modern frameworks and WebGL rendering — designed to make security analysis feel premium and intuitive.

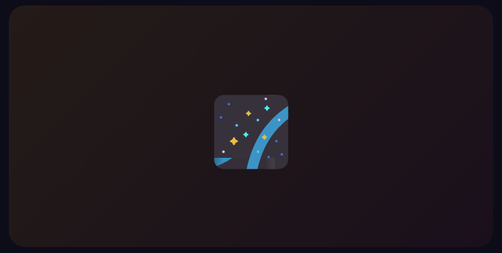

3D Tilt Stat Cards

Interactive perspective-shifting metrics with animated counters

Animated Visualizations

SVG score rings, donut charts, and bar graphs with spring physics

Starfield Background

WebGL particle system with frosted-glass UI layered on top

Built with Modern Frameworks · WebGL Rendering · Real-time Backend · Proprietary AI

BUSINESS MODEL

SaaS Revenue with 3 Tiers

Freemium acquisition → Pro conversion → Enterprise upsell. Designed for developer-led growth.

Hobby

Free

forever

- ✓ 3 scans / month
- ✓ Static analysis
- ✓ Basic report
- ✗ Dynamic analysis
- ✗ AI reports

POPULAR

Professional

₹2,499

/ month (₹1,999 annual)

- ✓ Unlimited scans
- ✓ Static + Dynamic
- ✓ AI-powered reports
- ✓ CI/CD API access
- ✓ Team sharing

Enterprise

₹8,499

/ month (₹6,999 annual)

- ✓ Everything in Pro
- ✓ SSO / SAML
- ✓ SLA guarantee
- ✓ Custom integrations
- ✓ On-premise option

GO-TO-MARKET STRATEGY

Developer-Led Growth Engine

🚀 Phase 1: Community (Q2 2026)

Free tier acquisition via developer communities (HackerOne, r/netsec, r/androiddev), security conferences, and open-source integrations. Target: 12,000 free signups.

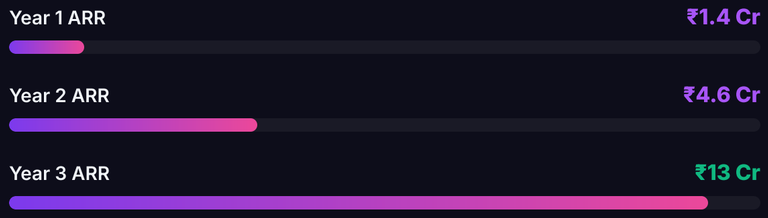

📈 Phase 2: Conversion (Q3 2026)

In-product upgrade prompts, usage-based limits, and AI report previews to drive Pro conversions. Industry benchmark: 2–5% for B2B SaaS (OpenView Partners).

🏢 Phase 3: Team & Enterprise (Q1 2027)

Self-serve Team tier adoption within engineering orgs + direct sales to security-conscious enterprises. Target: 50 Team accounts + 10 Enterprise contracts.

Revenue Projections

💰 LTV:CAC Target: 4:1 by Year 3 · AI-SaaS Gross Margin: 65–75%

TRACTION & MILESTONES

What We've Built So Far

Full Product Built ✓

End-to-end platform operational: upload → 6-engine scan → AI report → PDF export. Premium 3D dashboard deployed.

AI Engine v2.7 Deployed ✓

Upgraded to our latest proprietary AI model — 204K context window, 56.22% SWE-Pro, 97% skill adherence, Agent Teams capability.

Security Hardened ✓

Rate limiting, DoS prevention, error sanitization, sandbox isolation, and input validation all implemented.

Seeking Seed Round →

Ready for market launch, customer acquisition, and team expansion.

THE TEAM

Built by Security Engineers

Our team combines deep mobile security expertise with modern full-stack engineering to build the platform the industry needs.

Team Wormhole

Full-Stack Security Engineers

Built the entire platform end-to-end: 6-engine pipeline, AI triage system, premium 3D dashboard, and security hardening.

Android Security | AI/ML | Full-Stack | DevSecOps

Hiring Plan (Post-Funding)

🔬 Security Researcher 🎨 Product Designer 📈 Growth Lead

🛠️ Backend Engineer

THE ASK

Raising ₹18.6 Cr Seed

To accelerate market launch, build the team, and capture the developer security market.

40%

Engineering & AI

Hire 4 engineers (2 backend, 1 security researcher, 1 growth). Expand engine coverage (iOS, Flutter). Fine-tune AI on security corpus.

35%

Go-To-Market

Developer advocacy, content marketing, security conference presence, freemium acquisition.

25%

Infrastructure

Cloud compute for dynamic analysis emulators, AI inference, SOC 2 compliance certification.

Target: ₹14 Cr ARR by Year 3 · 4:1 LTV:CAC · 65–75% Gross Margin

Let's Secure the Mobile Future

Every Android app deserves a security audit.
Shinodroid makes it instant, intelligent, and beautiful.
