WORMHOLE // ShinobiDroid

Investor Pitch Deck | Seed Round 2026 | Confidential

India's First AI-Native Android Security Intelligence Platform

Upload an APK. Get a boardroom-ready security report in minutes.

01: The Problem

Indian App Teams Ship Fast. Security Is Always Last.

India now generates new Android apps at scale — **globally ~1,700 new apps are published daily on Google Play** ¹ — and India has one of the world's largest developer populations. Yet most Indian development teams — agencies, startups, fintech companies, govtech contractors — ship with **zero dedicated security resources**.

The problem is getting **worse**, not better:

Reality	Impact
79% of Indian organisations do not integrate security testing early in SDLC ²	Vulnerabilities ship directly to production
The rise of "vibe coding" — AI tools (Cursor, Copilot, ChatGPT) let anyone build and ship Android apps in hours, with no security knowledge	AI-generated code ships with hardcoded secrets, insecure APIs, and zero threat modelling
Manual pentests cost Rs. 1.5L--Rs. 8L per engagement	SMEs skip security entirely — or do it once a year
Enterprise AST tools cost Rs. 40L+ per year	Priced out of reach for 99% of Indian dev shops
DPDP Act 2023: fines up to Rs. 250 crore for security failures ³	Compliance is now a legal obligation , not optional
RBI mandates security audits for all payment apps	Banks, NBFCs, wallets are scrambling to comply

***The gap:** Between "skip security entirely" and "pay Rs. 40L/year for Veracode" — there is **nothing built for India**. And with vibe coding exploding the number of apps being shipped, the security debt is compounding daily.*

02: The Market Opportunity

A Billion-Dollar Market Growing Fast — in India Alone

Global MAST Market

Verified Source	Base Year	Projection	CAGR
Strategic Market Research ⁴	USD 5.3B (2024)	USD 15.1B (2030)	18.2%
Grand View Research — India ⁵	USD 398.8M (2025)	USD 2,048.8M (2033)	22.7%
ResearchAndMarkets — India ⁶	USD 1.41B (2025)	USD 2.74B (2029)	13.9%

TAM / SAM / SOM

TAM: ~Rs. 3,300 Cr — India application security market 2025 (*Grand View Research: USD 398.8M⁵*)

SAM: Rs. 850 Cr — Android-only SaaS security tools, targeting SMEs, fintech, and govtech (*Company Estimate*)

SOM: Rs. 85 Cr — 10% SAM capture by Year 3, achievable with 3,500 paying customers at Rs. 20K ARR avg (*Company Estimate*)

03: Why India. Why Now.

Five Tailwinds That Make This Moment Irreversible

- **Regulatory pressure is real:** DPDP Act 2023³ + CERT-In 6-hour breach reporting mandate + RBI cybersecurity framework for banks all require demonstrable app security.
- **No local hero:** Appknox (India/Singapore) targets large enterprises at quote-based enterprise pricing. No Indian product serves the **Rs. 10K--Rs. 1.5L/year** SME bracket.

- **Android dominance:** India's smartphone market is **95.49% Android in 2024**¹⁰. The entire attack surface is APK-based.
- **Growing developer population:** India has **5.8M+ software developers**⁹, with strong growth in fintech, healthtech, edtech, and govtech Android apps.

04: The Solution

ShinobiDroid: Drop an APK. Receive an Intelligence Report.

Upload once. Get **5 engines** of automated analysis plus an **AI-written boardroom report** -- in under 30 minutes.

What Makes Our Reports Different

Traditional Scanner Output	ShinobiDroid Output
Raw CVE list, no context	Narrated security story in plain English
Developer-only technical dump	Separate views: CTO, developer, auditor
Generic OWASP mapping	DPDP, RBI, CERT-In, PCI-DSS mapped
Static PDF from tool	AI-written with exploit scenarios and fix code
No remediation code	Kotlin/Java/Flutter code snippets for every fix
Plain charts	Vivid, readable security intelligence visuals

05: Product Demo Flow

The 4-Minute Experience

Key UX principle: Zero setup. No SDK. No agent. No source code required. **Just the APK.**

06: Competitive Landscape

At the Intersection of Accessible and Intelligent

Competitor Comparison Matrix

Feature	ShinobiDroid	Appknox	Ostorlab	MobSF	APK Scanner Pro
APK upload, no setup	YES	Enterprise only	YES	Self-hosted	YES
Static analysis (SAST)	YES	YES	YES	YES	YES
Dynamic analysis (DAST)	YES (Frida)	YES (Real devices)	YES	YES	NO
AI-written narrative report	YES	NO	NO	NO	Basic AI only
India compliance (DPDP/RBI)	YES	NO	NO	NO	NO
INR pricing	YES	NO (USD)	NO (USD)	Free OSS	NO (USD)
Webhook and Email alerts	YES	NO	Partial	NO	NO
CI/CD integration	YES	YES	YES	Partial	NO
On-premise option	YES	YES	YES	YES	NO
India-based team	YES	Partial (SG/India)	NO	NO (OSS)	NO

Our unfair advantage: The only platform combining 5-engine automated analysis + AI narrative reports + India compliance templates + INR pricing -- all in one self-serve product.

07: Business Model

INR-Native Pricing. 95%+ Gross Margin. Built to Scale.

Unit Economics: Cost Per Scan (Verified)

All figures from verified sources: GCP VM pricing ^BM1, MiniMax platform pricing ^BM2, GCP Cloud Storage pricing ^BM1b:

Cost Component	Per Scan (USD)	Per Scan (INR @ 83)	Source
Compute: GCP e2-standard-4, 25 min, asia-south1	USD 0.0671	Rs. 5.57	USD 0.161/hr verified ^BM1
AI: MiniMax M2.5, 10K in + 5K out tokens	USD 0.009	Rs. 0.75	USD 0.30/M in + USD 1.20/M out ^BM2
Storage: 50 MB APK + report, 30 days	USD 0.00115	Rs. 0.10	USD 0.023/GB-mo, asia-south1 ^BM1b
Variable COGS/scan (verified total)	USD 0.077	Rs. 6.42	All three components above
Total COGS/scan incl. fixed overhead (500 scans/mo)		~Rs. 15	Rs. 6.42 + Rs. 8.30 fixed overhead amortised
Total COGS/scan incl. fixed overhead (10,000 scans/mo)		~Rs. 7	Rs. 6.42 + Rs. 0.42 fixed overhead amortised

Why GCP over AWS: GCP e2-standard-4 (asia-south1) at USD 0.0671/25-min is **10.16% cheaper** than AWS t3.xlarge (ap-south-1) at USD 0.0747/25-min ^BM1c. Additionally, GCP supports **nested KVM virtualization on all standard VM types** (e2/n2/c2) without bare-metal instances — critical for running Android emulators in the Frida dynamic analysis engine ^BM1d.

CUD savings: A 1-year Committed Use Discount reduces e2-standard-4 in asia-south1 to USD 0.1014/hr (from USD 0.161/hr on-demand) — a 37% cost reduction once scan volume justifies commitment ^BM1.

Margin path: Post-seed, we acquire dedicated **Apple Silicon inference hardware** to run a fine-tuned security analysis model on-premise. At 2,000+ scans/month, this eliminates the MiniMax API cost (Rs. 0.75/scan) entirely, pushing gross margin from **96% towards 99%**.

Pricing Tiers -- INR First (All prices ex-GST; 18% GST applicable for Indian customers ³⁾)

Tier	Monthly	Annual	Scans	Key Features
Free	Rs. 0	Rs. 0	1/month	2/5 engines (static only), basic PDF, 7-day retention
Developer	Pay-per-scan	Pay-per-scan	On demand	Rs. 499/scan, all 5 engines, OWASP mapping, 30-day PDF. Ideal for vibe coders shipping AI-generated apps.
Startup	Rs. 2,499	Rs. 24,990	5/month	All 5 engines, DPDP compliance, Webhook + Email alerts, CI/CD API, 3 users
Growth	Rs. 6,999	Rs. 69,990	20/month	3 AI reports/scan (Dev+CISO+Compliance), RBI+PCI-DSS, white-label, 10 users
Enterprise	Custom	Rs. 5L--Rs. 25L/yr	Unlimited/scope	On-prem, all 7 compliance templates, SLA, dedicated AM

Annual plans = 10 months price for 12 months (16.7% discount -- global SaaS standard ⁴⁾)

Competitive Price Anchoring (Verified Sources)

Competitor	Price	vs. ShinobiDroid
Beagle Security (India-origin, web security) ⁵⁾	USD 119/mo (~Rs. 9,900)	4x more expensive than our Startup tier
Appknox (India/SG, mobile security) ⁶⁾	USD 799+/mo (~Rs. 66,400) in 2016	10x+ more expensive than our Growth tier
Astra Pentest (India-origin) ⁷⁾	USD 199/mo (~Rs. 16,500)	2.4x more expensive; no India compliance
APK Scanner Pro ⁸⁾	USD 15/scan (~Rs. 1,250)	Rs. 499 vs Rs. 1,250 -- we are 2.5x cheaper

Freemium Conversion Model

- Global B2B SaaS freemium-to-paid: **2--5%** (developer tools: 1--3%) ⁹⁾
- At 3% conversion: 1,000 free users = **30 paying customers** per cohort
- Free tier COGS: ~Rs. 15/user/month (1 scan)
- Cost to acquire 1 paying customer via free tier: **~Rs. 500** (extremely low CAC)

08: Go-to-Market Strategy

Product-Led Growth + Community + Channel Partners

Customer Acquisition Channels

Channel	Cost	Expected CAC	Notes
Developer community (free tier)	Low	Rs. 0	PLG -- converts 3-5% to paid
Content marketing (security reports on Indian apps)	Medium	Rs. 8,000	Authority + PR
NASSCOM / startup events	Medium	Rs. 12,000	Enterprise pipeline
Google/LinkedIn ads (India SME targeting)	Medium-High	Rs. 18,000	Direct response
Channel partners (IT consultancies)	Low COGS	Rs. 5,000	20-30% referral fee

Target LTV:CAC ratio: 5:1 (Rs. 1.5L average LTV / Rs. 30,000 avg blended CAC)

09: Traction and Validation

Market Has Proven Willingness to Pay -- We Need to Scale

External Validation

- **Appknox** (India/Singapore) -- enterprise mobile security pioneer, active customer base, demonstrates Indian enterprises pay for mobile AppSec
- **Appvigil** (IIT-Bombay incubated) -- raised Rs. 1 crore angel funding for APK upload SaaS in 2014; proved the model works, left a gap for a modern successor
- **APK Scanner Pro** -- USD 4-15/scan pricing validated by global market; thousands of active users
- **Grand View Research** -- confirms India is the **fastest-growing AppSec market in Asia-Pacific** at 22.7% CAGR

Product Milestones

10: Financial Projections

Path to Rs. 85 Crore ARR by Year 3

All financial projections below are Company Estimates — Illustrative Only. Not based on contracted revenue.

Metric	Year 1	Year 2	Year 3
Total Customers	250	1,100	3,500
Free to Paid converts	50	250	600
Developer / Startup	180	750	2,500
Enterprise	20	100	400
ARR (Rs. Crore)	Rs. 3.2 Cr	Rs. 22 Cr	Rs. 85 Cr
Gross Margin	72%	78%	82%
Burn Rate (Rs. Cr/mo)	Rs. 35L	Rs. 65L	Rs. 1.2 Cr
Runway post-seed	24 months	--	--

Key Assumptions

- Average Revenue Per Customer: Rs. 91K blended across all tiers
- Developer-to-Startup upgrade rate: 25% within 12 months
- Enterprise deal cycle: 3-6 months average
- Net Revenue Retention: 115% via expansion from more apps + compliance services

11: Why This Team

Security-first Builders with India DNA

(Team section -- customise with actual bios before pitching)

Role	Background	Why Us
CEO / Product	Built ShinobiDroid from scratch; full-stack + security	Deep product intuition, direct customer contact
CTO / Engineering	[Background]	Shipped the 5-engine pipeline and AI report system
Security Lead	[OSCP/bug bounty/pentest experience]	Provides technical credibility with enterprise buyers
GTM / BD	[NASSCOM, fintech, IT sales background]	Existing relationships with Indian fintech and agency buyers

Advisors (planned):

- Ex-CERT-In / cybersecurity regulator (provides compliance credibility)
- IIT professor / IIT-incubator network (mirrors Appvigil's early success)
- Senior CISO from Indian banking sector (enterprise sales pipeline)

12: The Ask

Seed Round: Rs. 5 Crore (approx. USD 600K)

Use of Funds

Category	Budget	Purpose
Engineering	Rs. 1.50 Cr	Hire 2 senior engineers -- iOS support, CI/CD integrations, enterprise features
Sales and Marketing	Rs. 1.25 Cr	2 BD hires, developer community, NASSCOM/iSPIRT events, content marketing
Cloud Infrastructure	Rs. 75L	GCP asia-south1 (Mumbai): nested virtualisation for Android emulators, Supabase Pro, Cloud Storage, CDN
AI Inference Hardware	Rs. 50L	Dedicated Apple Silicon inference server for on-premise AI inference -- eliminates MiniMax API costs at 2,000+ scans/month, pushing gross margin from 96% to 99%
Certifications	Rs. 50L	ISO 27001 (enterprise table-stakes), CERT-In empanelment
Legal and Reserve	Rs. 50L	Incorporation, IP protection, 3-month cash buffer

Milestones With This Funding

- **Month 6:** 100 paying customers -- Rs. 50L ARR run-rate

- **Month 12:** 500 paying customers -- Rs. 4 Cr ARR run-rate
- **Month 14:** Acquire AI inference hardware (volume threshold: 2,000 scans/month) -- gross margin improves to 99.2%
- **Month 18:** First 10 enterprise contracts (Rs. 5L+ each / year)
- **Month 24:** Series A ready at Rs. 20 Cr+ ARR

Ideal Investor Profile

We are looking for investors who bring:

- **India B2B SaaS** portfolio and network (NASSCOM, iSPIRT, Blume, Lightspeed India)
- **Cybersecurity / DevTools** domain expertise
- **Fintech / banking enterprise** sales network for warm introductions

13: Vision

Every Indian App Should Be Secure by Default

India writes code for the world. We build the security layer that makes it trustworthy.

In 3 years: Rs. 85 Cr ARR, 3,500 customers, the default security audit tool for Indian fintech.

In 5 years: Pan-Asia-Pacific -- the "Stripe for App Security" -- a security intelligence API that every Indian app development pipeline calls before every release.

Appendix A: Regulatory Landscape (India)

Regulation	Who it affects	ShinobiDroid's role
DPDP Act 2023	All apps handling personal data of Indian users	Compliance report template; data-flow analysis finding
RBI Cybersecurity Framework	Banks, NBFCs, payment aggregators	Mandated security audit evidence; maps to RBI controls
CERT-In Directions 2022	All entities; 6-hour breach reporting	Incident surface identification; pre-breach audit trail
PCI-DSS v4.0	Any app accepting card payments	Automated PCI-DSS mapping in every scan report
SEBI Cybersecurity Circular	Broking apps, mutual fund platforms	Evidence of continuous security monitoring
IRDAI IT Guidelines	Insurance apps	Compliance report for auditors
